ILIKO
Health Assistant

Remote Health Monitoring via Voice

Iliko consists of a Patient-Skill for Amazon Alexa and a Web App for the caretakers

Who?

Seniors with low-level of Dementia who live at home and depend on remote caretaking
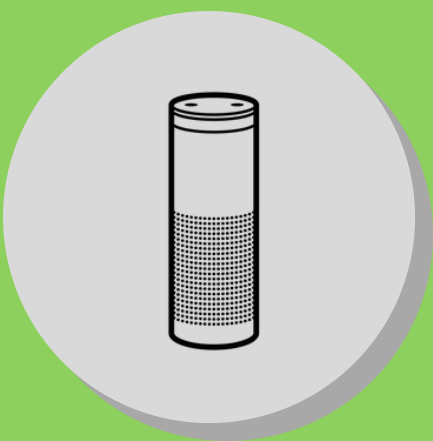

What?

Recording vitals, activities and medication intake and send them to caretakers for monitoring

Why?

Current solutions depend on screen-inputs, not taking into account physical limitations such as bad vision

How?

Program that utelises Intelligent Personal Assistants, runs on Amazon Alexa and fully controllable via Voice

Developed as final industry project of MSc. Computer Science at University College London in cooperation with NHS Digital

Developer: Daniel Kremerov
Supervisor: Dr. Dean Mohamedally
